PROFESSIONAL SUMMARY

Data analytics leader with 7+ years turning complex operational and performance data into root-cause findings and actionable recommendations. Builds KPI frameworks, automated recurring reporting, and predictive models in SQL/Python that monitor performance and surface issues early. Partners cross-functionally to drive improvements without direct authority and presents clear narratives to senior leadership.

EDUCATION

University of San Francisco
Bachelor of Science - Physics

EXPERIENCE

Manager of Analytics, Counterparty Risk **February 2026 – Present**
Aqua Finance, Inc. *Remote*

- Built counterparty risk KPI frameworks, early-warning indicators, and predictive models to monitor performance across dealers and applications and identify root causes of emerging risk
- Developed automated SQL/Python pipelines, recurring reports, and dashboards that improved the timeliness, accuracy, and consistency of monthly portfolio monitoring
- Partner with Credit, Operations, Sales, Underwriting, and Data Engineering to translate requirements into scalable solutions; manage and mentor a Junior Analyst

Sr. Risk Analyst **June 2021 – February 2026**
Solar Mosaic LLC *Remote/Oakland, CA*

- Built an XGBoost model predicting each dealer's offboarding probability at 3-, 6-, and 12-month horizons, enabling proactive intervention
- Implemented dynamic partner risk scorecards, daily-updating schemas, and automated alerts with Data Engineering (dbt, Airflow, AWS, Snowflake)
- Developed SQL/Gephi network analysis of IP, geographic, and business-registration data to uncover hidden relationships among connected entities

Lead Software Developer (Contract) **October 2019 – June 2021**
L-Egant Solutions, LLC *Irvine, CA*

- Developed Python tools for high-frame-rate camera control and quantitative image analysis (pixel intensity, 2D Gaussian fitting)

Data Analyst, Portfolio & Servicing Risk **August 2019 – June 2021**
Mechanics Bank Auto Finance *Irvine, CA*

- Built Random Forest models to forecast portfolio losses and inform credit policy
- Applied K-means and hierarchical clustering to segment collection-agent performance and identify drivers of underperformance

PROJECTS

when-where travel.iesepulveda.com
Full-Stack Travel Recommendation Engine

- **Data Sources:** REST APIs (World Bank Data360, Eurostat, Open-Meteo, Overpass) and web scraping (MICHELIN Guide) to build destination-scoring datasets
- **Pipeline:** Python ETL to clean, merge, and reconcile heterogeneous structured/unstructured data (weather, economic, crime, tourism) across inconsistent country/city coding schemes

SKILLS

Languages & Libraries: Python, SQL, R, pandas, scikit-learn, Matplotlib, ggplot2
Tools & Platforms: Tableau, Excel, PowerPoint, Snowflake, dbt, Airflow, AWS, Docker, GitHub, Gephi
Methods: Root Cause Analysis, Forecasting, Monte Carlo Simulation, Hypothesis Testing, Network Analysis, XGBoost, Random Forest, K-Means
